Control and Manage

Easily manage your bulk and waste water locales with detailed, accurate transaction records by Computrol Systems. Simplify your control of water resources with preset daily and monthly limit for each authorized user. You can enforce license limits and manage equitable sharing of this scarce resource in times of drought.

Excellent Scalability

Serve multiple customers at the same time at your depot and expand to other locales as you need with our highly scalable system. We can satisfy your operation requirements: from a stand-alone terminal at an individual site to many linked terminals across multiple locations. Each terminal can control various water grades and connection points.

Secured Access

Computrol Systems protect your sites from misuse and theft. Access to bulk water or waste discharge inlets can be highly secured to restrict access to authorized users only.

Generate Revenue

You can earn revenue and improve your cash flow from your water services in multiple convenient ways with Computrol's self-service terminals. Your customers can obtain water by means of prepaid credit via their ID card or PIN code, and easily top-up their credit with Simcom Water's online payment facility. You can simply produce an accurate monthly bill on account for each user.

System Features

- Easy to retrofit into existing bulk water stations with simple relay and pulse control interfaces

- Optional receipt printer provides transaction records for users

- Operate year round with a weather-proof BOE vandal resistant design

- Easy to manage your site settings with programmable limits, timers and counter ratios

- Provide accurate measurements (liter, gallons, cubic meters or other) for different water grades and locales
